SYSTEM DATA SHEET

Sikafloor® MultiDur ES-44 ESD

SMOOTH, UNICOLOUR EPOXY FLOOR COVERING WITH POLYURETH-ANE ESD ROLLER COATING

DESCRIPTION

The Sikafloor® MultiDur ES-44 ESD system is a seamless, smooth, low VOC, ESD epoxy floor covering. It consist out of the two part, self-smoothing, epoxy coating Sikafloor®-263 SL and the two part, water dispersed, coloured ESD polyurethane roller coating Sikafloor®-305 W ESD.

USES

Sikafloor® MultiDur ES-44 ESD may only be used by experienced professionals.

It is used as:

- Dissipative coloured indoor system for electrostatic protected areas (EPA).
- Particularly suitable for areas with requirements for the lowest electrostatic charge (low BVG - Body Voltage Generation) and dissipative surface
- Typical applications include clean rooms in the electronics industry, microbiology/microchemistry sectors, production plants in the automobile industry etc.

CHARACTERISTICS / ADVANTAGES

- Very low VOC emissions
- Water based
- Easy to apply
- Easy to refurbish, can be overcoated directly with itself
- Low odour
- Good UV resistance, good resistance to yellowing
- Easy to clean
- Conforms to the requirements of ANSI/ESD S20.20 and IEC 61340-5-1
- Matt surface
- Suitable as floor covering acc. DIN VDE 0100-410 / T610 as top coat of non-conductive Sikafloor products

APPROVALS / STANDARDS

- Synthetic resin screed material according to EN 13813:2002, Declaration of Performance 02 08 01 02 037 0 000001 2017, certified by notified factory production control certification body 0921, certificate of conformity of the factory production control 2017, and provided with the CE marking.
- Coating for surface protection of concrete according to EN 1504-2:2004, Declaration of Performance 02 08 01 02 037 0 000001 2017, certified by notified factory production control certification body 0921, certificate of conformity of the factory production control 2017, and provided with the CE marking.
- Test of the Insulation Resistance acc. DIN VDE 0100-410/T610. Test Report P 9915-E, Kiwa-Polymer Institut

PRODUCT INFORMATION

Packaging	Please refer to individual Product Data Sheet.	
Shelf life	Please refer to individual Product Data Sheet.	
Storage conditions	Please refer to individual Product Data Sheet.	

MAINTENANCE

To maintain the appearance of the floor after application, Sikafloor®–305 W ESD must have all spillages removed immediately and must be regularly cleaned using rotary brush, mechanical scrubbers, scrubber dryer, high pressure washer, wash and vacuum techniques etc. using suitable detergents.

CLEANING

Please refer to the Sikafloor® Cleaning Regime.

FURTHER DOCUMENTS

Please refer to:

- Sika® Method Statement Mixing and Application of Flooring Systems
- Sika® Method Statement Surface Evaluation & Preparation

LIMITATIONS

- Epoxy surfaces must be sanded e.g. with a 3M™
 Brown Stripper Pad in combination with low speed
 automatic scrubbers or rotary floor machines (175 –
 600 rpm) in order to ensure a proper adhesion of
 Sikafloor®-305 W ESD.
- The freshly applied final conductive coating of the Sikafloor® MultiDur ES-44 ESD system must be protected from damp, condensation and water for at least 24 hours.
- Ensure adequate ventilation during application and drying (especially at temperatures < 13°C). Otherwise the reaction and drying processes may be impaired.
- Sika does not accept any liability for changes of the floor characteristics caused by changes in the composition of the recommended cleaning- and maintenance agents
- If the floor is exposed to mechanical and / or chemical loads, the conductivity must be controlled regularly. In case of wear and tear, the final conductive coating of the Sikafloor® MultiDur ES-44 ESD system must be refreshed. This must be coordinated with the authorized ESD-representative or comparable.
- Under certain conditions, underfloor heating combined with high point loading, may lead to imprints in the resin
- If heating is required do not use gas, oil, paraffin or other fossil fuel heaters, these produce large quantities of both CO₂ and H₂O water vapour, which may adversely affect the finish. For heating use only electric powered warm air blower systems.
- For exact colour matching, ensure the final conductive coating of the Sikafloor® MultiDur ES-44 ESD system in each area is applied from the same control

batch numbers.

- ESD clothing, ambient conditions, measurement equipment, cleanliness of the floor and the test person have a substantial influence on the measurement results.
- ESD-footwear must fulfil the requirements of DIN EN 61340-4-3 (Climate 2, resistance < 5 M Ohm).
- Tires might generate dark marks on Sikafloor®-305 W ESD because of plasticizer migration.
- In case of increased demands on the cleanability, Sikafloor®-305 W ESD can be over coated with the static dissipative floor polish "Jontec ESD" or "Jontec Destat" from Diversey Care. Please refer to the cleaning regime of Sikafloor®-305 W ESD.

All measurement values for the Sikafloor® MultiDur ES-44 ESD system stated in the system data sheet (apart from the ones referring to proof statements) were measured under the following conditions:

Size of ESD-footwear:	42 (EU) (UK: 8; US: 8,5)
Weight test person:	90 kg
Ambient conditions:	+23 °C/50%
Measurement device for	Metriso 2000 (Warmbier)
the Resistance to Ground:	or comparable
Surface resistance probe:	Carbon Rubber electrode.
	Weight: 2.50 kg
Rubber pad hardness:	Shore A 60 (± 10)
Measurement device for	Metriso 2000 (Warmbier)
the System Resistance:	or comparable
Measurement device for	Walking Test Kit WT 5000
the Walking Test:	(Warmbier) or compar-
	able

The number of conductivity measurements is strongly recommended to be as shown in the table below:

Ready applied area	Number of measure- ments
< 10 m ²	6 measurements
< 100 m ²	10-20 measurements
<1000 m²	50 measurements
<5000 m²	100 measurements

In case of values lower/higher as required, additional measurements has to be carried out, approx. 30 cm around the point with insufficient readings. If the newly measured values are in accordance with the requirements, the total area is acceptable. Installation of earthing points: Please refer to the Method Statement: "MIXING & APPLICATION OF FLOORING SYSTEMS".

Numbers of earth connections: Per room at least 2 earthing points. The optimum number of earth connections depends on the local conditions and should be specified using available drawings.
