APPLICATION INSTRUCTIONS

APPLICATION METHOD / TOOLS

1. After cleaning dust etc. from the drill hole, the perforated sleeve is placed into the drill hole.
2. Starting from the bottom of the perforated sleeve, gradually apply the Sika AnchorFix® anchoring adhesive into the sleeve so the resin squeezes out through the perforations.
3. Close the sleeve centre ring cap to avoid resin escaping before insertion of the anchor.
4. Insert the anchor into the sleeve with a rotary motion within the adhesive open time. Some of the adhesive must flow out of the end of the sleeve and through the perforations into the cavity of the hollow masonry.
