Sikafloor® Marine

Proven solutions for comfort and safety

BUILDING TRUST

Sikafloor® Marine SYSTEMS

Sikafloor® Marine SELF-LEVELLING COMPOUNDS

To be able to give the applied carpets, vinyl, tiles etc. a perfect smooth look it is important that the underlayment has a smooth surface. This can be ensured by using the one-component, pumpable technology of self-levelling mortars from Sika. In addition to build other Sikafloor® systems, the Sikafloor® Marine self-levelling products can be applied on top of existing hard foundations such as concretes and steel.

Sikafloor® Marine LEVELLING AND FAST CURING COMPOUNDS

Sikafloor® Marine levelling compounds are based on a one-component pumpable technology from Sika. The solutions provide cost effective benefits for the shipyard and installation team in logistics, handling and time of installation. Sikafloor® Marine self-levelling and fast curing compounds can easily be mixed using only a handheld mixer or a pump. The levelling compounds can be trowelled and are as well suitable for slopes.

Sikafloor® Marine FLOATING FLOORS

Sikafloor® Marine floating floor systems consist of a mineral wool layer on which either a non-combustible one-component fast curing compound or steel or alu plates are applied. These build-ups give maximum sound reduction and provide a high degree of comfort for the crew onboard the vessel. The Sikafloor® Marine floating floors are all a part of an A60 fire rated solution with building height of only 45 mm.

Sikafloor® Marine VISCO-ELASTIC FLOORS

Sikafloor® Marine visco-elastic floors are a build-up with a visco-elastic layer and a constrained layer applied on top. The constrained layer consists of a non-combustible one-component compound of Sikafloor® Marine or it can be steel or alu tiles. The Sikafloor® Marine visco-elastic product is a special two-component polyurethane or mortar, with only one purpose – to dampen the vibrations in the structure.
